

Application	Customer Release Notes
PP	Payroll was updated to include the ability to secure the social security number values and employee number values by user. Contact support for assistance.
PP	The printing labels options were updated to print the zip plus 4.
PT	Property Tax was updated to correct a problem where tax bill messages did not display in reverse video or sound the bell correctly.
PT	Rebuild Bill Alt Keys was updated to run through night process instead of giving the error that the user does not have access privileges.
UB	A new program was created to clear the social security numbers, drivers license numbers and/or user key fields on customer accounts. Contact support for assistance with this program.
UB	A new program was created to read the file created by the Build Mailing Service File option and print the data including field headings so it can be verified before sending the file to the printing company. This option offers an account number range to include as well as the number of records to include. The Mail File Name on the screen must be changed to match the name specified when the file is built. The Build Mailing Service File option must be ran before using this option. We have requested this be added to the billing menu. Contact support for assistance in running this until it is added to the menu.
UB	Bill Calculation in night process was updated to record the message "Error: Previous Calculation has not been updated-Bill Calculation Aborted" in UBN210LS if bill calculation is ran in night process but there was already a billing in process that had not been updated. The bills are not calculated in night process. The message in the UBN210LS file notifies the customer of the problem.
UB	Inquiry was updated to add screen 18 to track up to 10 email addresses including an E-bill flag that when set to Y generates the ebill for that email address, when set to N is for informational purposes only. This works along with the Sort Bill For Pulling flag on screen 2 to determine whether the account gets an ebill and printed bill or just an ebill. Contact support for additional information.
UB	New Meter Inventory, Account History and Inventory Listing Reports were updated to correct a problem where the Model and Meter Size fields printed zero and blank records in addition to those specified in each field. The reports now have pound signs (#) in the second and third selection fields to tell the program to exclude zero and blank records. Clear out the pound signs if the report needs to include zero and blank records.
UB	Scanning from UB was updated to allow the second name line and service address to be included in the .IER file. Contact support for assistance.
UB	The Electric Usage Report was added to the Miscellaneous Reports menu. The character menu was rearranged. The Address Labels and Meter Inventory reports were moved to the left side of the menu.
UB	UBS795 that builds the internet file for BIS was updated to add a runtime parameter "Exclude cutoff". If this is set to Y, accounts that have a cutoff in process flag set to Y on screen 2 are not included in the internet file. If this is set to N, accounts are included in the file regardless of the cutoff in process flag.
