

<u>Application</u>	<u>Customer Release Notes</u>
AP	Accounts Payable was updated to include calendar year end changes for 2008.
BL	BL1675 was created to print a Local/State Breakdown to show the breakdown of the tax, 15% of local, penalty and interest for state and local. This can be used to verify the amounts in the GL packet as well as on the state annual report. When printing this report to balance to the GL packet, specify transaction code 200 only. When printing this report to balance to the state annual report, specify transaction codes 200, 910 and 920.
BL	Business License Calculation was updated to accept deduction amounts of over \$1,000,000.00.
GL	GLU415 that exports packets to Flexgen was updated to require the user type "CONTINUE" if the packet being exported has a status of P-processed.
PP	Payroll was updated to include calendar year end changes for 2008.
PT	When the Parcel Report is printed for one tax year and bill number it should print all of the parcel history for the selected tax bill. This was not working correctly and has been fixed.
UB	For TVA site, Bill Calculation was updated to stop the calculation when the wholesale rate tables are not defined for the selected billing month. Previously, a warning displayed but the calculation continued after pressing enter on the warning. Since some users did not notice the warning the software was updated to return to the menu after pressing enter on the warning.
UB	The Cleanup Database option was updated to produce an edit report for any problems found in the data.
XX	The GUI menu was updated to clear the menu options on the right side of the screen if the cursor is on the left side of the screen. Previously, if the user pressed escape one time too many and put the cursor on the left side of the screen (Available Systems) by accident but clicked on a menu option on the right side of the screen, it launched the last application code on the Available Systems menu. If this was test files for the application they were previously working in, work was done in test files rather than live files without the user noticing it.
