

<b>Application</b>	<b>Customer Release Notes</b>
IP	Point of Sale receipt printing was updated to print two copies of a receipt on one page through a laser printer.
PP	The payroll menu was updated to correct some spelling errors and remove unused or blank menu options. The utilities menu was also rearranged into sub menus. See document "PPMENU Changes 01-2009.pdf" in the Release Documentation folder.
PT	The PTDDFDM was updated to add DDF field 1285 to print the Account Number and 1286 to print the Previous Account Number. These are fields from the Parcel Info screen.
PT	The Receipt History Report was updated to not print voided receipts when the receipt date range does not include the voided transaction date and History Voids is set to E to exclude. It previously printed a Y under the History Void column on the report. Now this column is blank.
UB	A program was created to mass update meter message codes on metered service records. Contact support for details.
UB	For TVA distributors: If the wholesale rate tables are not defined for the billing month specified, the message explaining this displays then the cursor returns to the menu. The calculation will not continue until the wholesale rate tables are defined. This is to stop the problem where users miss the error message and calculate the electric bills without the fuel cost adjustment.
UB	Print Delinquent Notices (Form) was updated to include a beginning account number field to be used for restarting the print job at the selected account number. The same "Sort Sequence" used when the notices were first printed must be used when entering a starting account number.
UB	Screen 16 in UB inquiry was updated to include Gas Meter Link and Gas Read Sequence fields.
UB	The End Use Billing Report was updated to correct a problem where adjustments posted to accounts billed for rate code 54 where the original consumption was over 1,000 kW but the adjustment reduced the consumption to less than 1,000 kW were not printing the correct breakdown in the 0-1000 and over 1000 kW fields.
XX	For ImageEase sites: Systemwide Parameters, User Profiles was updated to include a parameter to control the default setting for the "Export to Scanning System" question that displays when printing reports. The question can default to Y, N or the cursor can skip the field. Contact Support for assistance.
