

New & Changed

Listed here are the changes and enhancements that have been made to the Ctrac software.

ENTRY

1. A problem where a Ctrac program would disappear has been corrected. This would cause the DBMS screen to stop pulling in field values.
2. The Parcel ID, Footprint Link, GIS #, Square Footage, ERUs, Yearly Rate and Last Update fields can be added to a DBMS screen. Datanames are CTCAU2PS-PARCEL-ID, CTCAU2PS-FTPT-LINK, CTCAU2PS-GIS-NO, CTCAU2PS-SQFT, CTCAU2PS-ERU, CTCAU2PS-YEARLY-RATE and CTCAU2PS-LAST-UPDATE. A change was made to the DBMS program to accomodate up to 6 decimal places in a DBMS field. The square footage field is 5 decimal places.
3. If you selected Delete mode then hit escape to select Update mode, the program would hang up. This has been corrected.
4. An event code was defined to print a form and to change the status on the Ctrac entry. The form would print but the status would not change. This has been corrected.
5. A program was created to allow mass creation of event codes on Ctrac records. This can be used to reset the Ctrac status on entries based on selected criteria.
6. A problem where the screen message would not display if the "Auto Close Default" parameter was set to Y has been corrected. The message will display on the account even if it is set to auto close at entry.
7. The Meter Read field from screen 5 can now be pulled into a DBMS screen in Ctrac so that it can be printed on Ctrac forms. The DD name to use is: CTCAU2PS-??-MTR-READ-FLD where ?? is EL, WA, or GS.

ACH PROCESSING

1. The "Load Bank File" option is used to load in the bank ABA numbers and bank names so they do not have to be manually created. This option was previously loading a file that did not contain all of the bank records. This has been updated to load the file that contains all of the bank records. Contact support to get this new file loaded onto your system.

REPORTING

1. When on the Ctrac Detail Listing report screen, if you press F3 then go into 6-DQ Manager and press F9 to back to the report screen, the screen would not redraw correctly. This has been corrected.
2. The Ctrac User Defined Report option issue date range was not working correctly. This has been changed so that the issue date range entered is used to select entries to include on the report.
3. The Ctrac Detail Listing was updated to include the event code description.

FILE MAINTENANCE

1. A problem with the Renumber Ctrac entries option was corrected. If the entry is not renumbered, an error message will display.
2. A problem with the Renumber Ctrac entries option was corrected to validate the Ctrac number to be renumbered and give an error if the record does not exist rather than changing the number to the next valid entry.
